

KEY FEATURES

Cost-effective integrated system for wetland delineation determination

Meets U.S. Army Corps of Engineer wetland delineation manual requirements

Streamlined routine Wetland Determination form creation and submittal

Nationwide coverage, all regional supplements supported

Run WetCollect mobile software on the Trimble GNSS handheld that suits data collection and accuracy needs

Feature packed handheld solutions—integrated camera, connectivity options, and long-life battery for all day use in the field

Data and forms management with WetCollect hosted server saves time and eliminates paperwork

COLLECT AND PROCESS WETLAND DELINEATION DATA IN THE FIELD WITH THE WETCOLLECT SYSTEM ON TRIMBLE HANDHELDS

Environmental professionals are frequently required to perform wetland delineations as part of a due diligence or site planning process. During this process, field data on vegetation, hydrology, and soils is collected per the US Army Corps of Engineers (COE) 1987 Wetland Delineation Manual and subsequent Regional Supplements. This data is often collected through handwritten field notes and then manually entered into the appropriate data form on a computer before being printed out for submission to the COE with the wetland delineation package in order to obtain a Jurisdictional Determination (JD). Now, using the WetCollect system combining

the WetCollect software with the power of Trimble® GNSS handhelds, field workers can perform this process digitally, leaving pen and paper behind, thus making the data collection and submission process more efficient and more accurate. Comprised of easy-to-use mobile software, a hosted secure server with a web interface, and a GNSS handheld, the WetCollect system allows you to manage your data more efficiently from field to submission. Using the WetCollect mobile software on a Trimble GNSS handheld you can reduce reporting time by up to 50% when collecting wetland data in the field.

Using the WetCollect mobile software on a GeoExplorer® series or Juno® series handheld, reduce reporting time by up to 50% when collecting wetland data in the field.

WETCOLLECT SYSTEM

SAVE TIME AND ELIMINATE PAPERWORK

Eliminate paperwork and meet regulatory requirements. On-the-spot completion of forms directly on the handheld eliminates the need to take handwritten notes—just enter data once avoiding the need to write it up later for submittal with a Jurisdictional Determination package. With one click the data is transmitted to the database on the WetCollect hosted server. In addition, the built-in data dictionary automatically provides you with the proper attributes to record in the field, eliminating the need to keep up with changing standards.

WORK EFFICIENTLY IN THE FIELD WITH TRIMBLE GNSS HANDHELD

From the compact Trimble Juno S series to the professional Trimble GeoExplorer 6000 series of handhelds—choose the Trimble handheld to suit how and where you work. Collect high-accuracy wetland delineation data with the GeoExplorer series, then with the Juno series easily log data points and real-time coordinates, allowing you to revisit exact locations during confirmation visits.

MANAGE DELINEATION DATA SEAMLESSLY WITH THE WETCOLLECT HOSTED SERVER

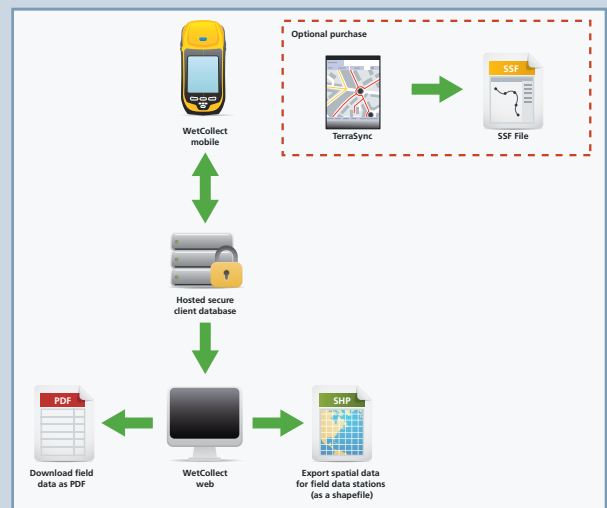

Your data is conveniently backed up on the WetCollect hosted server. Your projects and data forms can be accessed at any time via a secure login to the WetCollect web interface. Once logged in you can easily access data and print, email, or save your updated delineation data form as a PDF. You can synchronize data from multiple devices in one location to manage diverse projects and multiple field worker data uploads on the WetCollect hosted server and file projects there for convenient access at a later time. You also have the ability to protect and unprotect active forms and archive completed projects to ensure their safe keeping.

For more information go to www.trimble.com/wetcollect, email mgis_info@trimble.com, or contact your local Trimble reseller. To order Trimble handhelds and the WetCollect system, contact your local Trimble reseller.

Supported Trimble GNSS handhelds

- Trimble GeoExplorer 6000 series
- Trimble GeoExplorer 3000 series
- Trimble Juno S series

WetCollect software is designed to operate on devices running Windows Mobile® 5.0 and higher, including Windows® Embedded Handheld. Trimble testing is limited to the devices listed above.
